Summer Math

Math Skills for Rising Third Graders

FLASHCARDS

As summer begins, students need to continue practicing addition facts (sums to 19) and subtraction facts (differences 19 to 0). My recommendation for students is to practice math facts several times a week to ensure a smooth transition at the beginning of third grade. Use flashcards (Dollar Store \$1.00 for each set), use numbers on a deck of cards, and Math Facts Pro - online is available all summer. Your child needs to use Second Grade's username and password, and Teacher's Name CRosenfelder until September.

www.mathfactspro.com

For your child to be prepared for Third Grade Math, he/she must have addition and subtraction facts memorize.

Begin August 1st

Getting Ready for Third Grade - Go Math Lessons

Please download and copy the 20 Lessons for Getting Ready for Third Grade.

Print each lesson back to back because each lesson is two pages.

If you begin the lessons on August 1st and complete one lesson a day, this packet will be completed by August 25th. Some families may need to make adjustments for pacing the time schedule due to vacations. It is most beneficial to work on these lessons closer to the beginning of school.

Unlock the Problem

Each lesson begins with the explanation of the problems/strategies in that lesson. Ask your child to read and work through this section with you. Once your child understands, your child completes independently. Check together. Point out what is incorrect, and correct any errors.

Continue to memorize addition and subtraction math facts.

We will begin with daily timed fact practice, beginning with 60 problems in 5 minutes and progressing to 100 problems in 5 minutes. The students will also use Math Facts Pro in the Computer Lab.

These suggestions and resources will provide support to successfully maintain math skills taught in second grade.
